SOLAR CHARGER

INTRODUCING THE SC017
Solarola™
 THE SOLAR CELL CHARGER WITH A FLIP
 Cell Phones, MP3s and other select portable
 electronic/digital devices

Have the freedom to recharge your mobile technology when and where you need it.

Battery-on-Board™ lithium power storage technology included.

Solar Style™ — Own the Sun

WORKS INDOORS & OUTDOORS

Instant Power, Right Now.

The SC017 provides you with Instant Power – anytime, anywhere for all of your electronic digital devices.

PowerOn™ Technology. With PowerOn™ Technology, your **Battery-on-Board™** is charging constantly.* All you have to do is plug your electronic digital device into

the solar charger and you have access to *instant power, right now, anytime, anywhere and in any light!*

Lighten up, your future is very bright. Solar chargers provide you with a single instant power source for your electronic digital power requirements. There is no need for you to carry extra batteries. Solar Style™ enables you to lighten-up and power-on with our convenient multi-purpose solar chargers.

* Solar panels must be accessible to sun/light.

SOLAR CHARGER SC017 - Solar Charging Instructions

To Charge Your Solar Charger via the Sun:

The best condition for solar charging is a bright, sunny day. (5°C - 35°C/ 41°F - 95°F) The 'ON/OFF' switch should be in the 'OFF' position. Open the unit and allow the sun/light access to the solar panels. The 'INPUT' LED light will blink to indicate the unit is charging. Minimum exposure to sun is 1.5 hrs. Charging times differ based on intensity of light and temperature. When not charging, keep lid closed and store in a dry moisture free area. *The solar charger is not water-proof.*

Charging Your Device with the SC017:

1. Make sure your solar charger is charged or exposed to the sun/light source. Turn the solar charger on by pressing the 'ON/OFF' switch to 'ON'. A blinking 'OUTPUT' light indicates SC017 is ready to start charging your device.
2. Connect your electronic digital device to the SC017 using the appropriate connector.*
3. A blinking 'OUTPUT' light indicates that the device is being charged. Charging is complete when the 'OUTPUT' light stops blinking or the attached device indicates it is full. You can operate your digital device during charging.

* Connectors are sold separately. Additional connector cables are available for purchase by contacting a Solar Style™ retailer, calling our toll-free number (see below) or via our website (www.solarstyle.com).

Specifications

Size	97.5 x 53.2 x 16mm / 3.84" x 2.09" x .63"				
Weight	70g / 2.25oz.				
Solar Panels	Output Voltage (volts)		Output Current (mA)		
	7.0V		80mA		
Charger	Output Voltage(volts)		Output Current (mA)		
	5.5V		≤300mA		
Time for Full Charge:	Sun:12-14 hrs; AC/Car: 4-5 hrs				
Battery-on-Board™	Capacity	Voltage	mAh	Battery Type	Battery Life Cycle
	720mA	3.7V	≥720mAh	Lithium-polymer (thin)	≥400

SOLAR CHARGER SC017 - Optional AC/Car Charging Instructions

To Charge Your Solar Charger:

When the solar charger battery has lost the ability to charge, the 'Output LED Light' will not light up. Proceed with charging per enclosed instructions. It is recommended that you keep the unit charged at all times.

To Charge SC017 Using the Optional AC Adapter. – Turn 'ON/OFF' switch to the 'OFF' position. Connect the AC power plug into your outlet. Connect the AC adapter into the 'INPUT' outlet on the solar charger. A blinking 'INPUT' light indicates charging is in progress. A solid light indicates that the solar charger is fully charged. Charging times may differ. When not charging, keep lid closed and store in a dry moisture free area.

Specifications - AC Adapter

Input Voltage	Output Voltage	
100-240V	6.0V	Minimum Charge time: 1.5 hours.

To Charge SC017 Using Optional Car Adapter. – The 'ON/OFF' switch must be in the 'OFF' position. Insert Car Adapter into the lighter outlet in your vehicle. Connect the car adapter to the SC017 by inserting it into the 'INPUT' outlet on the side of the solar charger. A blinking 'INPUT' light indicates charging is in progress. A solid light indicates that the solar charger is fully charged. Charging times may differ. When not charging, keep the lid closed and store in a dry moisture free area.

Specifications - Car Adapter

Input Voltage	Output Voltage	
12V	7.5V	Minimum Charge time: 1.5 hours.
